PREFACE

The activity book includes different types and levels of activities that allow students to use the knowledge and skills they have learned at their schools. Through these activities, students will have the opportunity to monitor their own development, and at the same time, teachers will have the opportunity to give them effective feedback and to follow the cognitive development of their students at different levels. In this respect, the activities in the activity book are structured in a way that allows observing the outputs for all cognitive domain steps.

The use of all types of fill-in-the-blank, matching, multiple-choice, open-ended, and short-answer items in the activities aims to serve this purpose. In addition to these activities that students are already familiar with, the activity book contains activities such as crossword and wordsearch puzzles, which enable them to have a pleasant time. Also, in the “Do I remember?” section, students will be able to make their self-evaluations and have the opportunity to revise the parts of the theme in which they have a poor performance through the QR codes.

The activity book, which has been prepared and controlled by experts in the field, is intended to contribute to our students and teachers.

Music and Memory

Keeping students in music lessons is a great way to help them to have better verbal memories. According to a recent study, children who take a regular music training have better verbal memories and this advantage continues even after the training is finished. Researchers studied 90 boys aged six to fifteen. Half of the group had music training both from individual lessons and participation in their schools' string orchestras. When their verbal memories were tested, the young musicians performed much better than their non-musical peers. However, no such difference was found in tests of visual memory.

The researchers believe that there is a relationship between music and verbal memory because they are both centred in the left brain. Therefore, the music training may have served as a type of exercise for the brain, and consequently children who were interested in music performed better in related tasks. In a follow-up memory test a year later, researchers found that students who stopped taking a music training still performed better than those who had never taken any lessons in the first place. However, their level of verbal memory levelled off after they quit.

A. Answer the following questions according to the passage above.

1. What was the aim of the research?

.....

2. What changes were observed on the participants according to the research?

.....

3. Did the music training maintain its effect even after the participants stopped it?

.....

B. Complete the sentences according to the passage given above.

1. Taking regular music trainings have a positive effect on

2. There is no relationship between music and memory.

3. Both music and verbal memory are in the left brain.

4. The follow-up memory test was conducted later.

C. According to the information given in the passage, write a suggestion for people who want to improve their verbal memory.

If you want to have a better verbal memory, you should
